47 Fellows

1

lost to gun violence

98%

have no new firearm injuries

91%

are not a suspect in a new firearm related crime

COVID-19 & Gun Violence Reduction Work

In 2020, COVID-19 contributed to increases in firearm violence. We found that this increase in gun violence was a direct result of increased social isolation, depression, anxiety, fear & uncertainty brought on by COVID-19 policies. **The 2020 pandemic's impact on the Advance Peace (AP) model was profound.** AP requires that heavy doses of direct, persistent and rigorous face-to-face daily engagement be made with each enrolled Fellow. **Pandemic distancing and closures adversely impacted the ability of AP staff, Fellows & service providers to engage & do what they do best.** These restrictions on AP's engagement limited AP's likely impacts & any increases in gun violence reflect 2020's COVID reality. **However, if not for the continued engagement of AP during the pandemic, gun violence could have been a lot worse.**

5,008
